DETAILED ACTION

1. regarding the status of the claims in the instant application, the Examiner has made an updated search and found new prior art. The Examiner is obliged to apply the newly found prior art. Thus, the finality of the prior Office action has been withdrawn and a new rejection follows. The examiner regrets the delayed process of the application.

Accordingly, claims 21-50 are pending.

Claim Rejections-35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 21-50 are rejected under 3 5 U.S.C. 103(a) as being unpatentable over Judson (U.S.Patent No.5,572,643) in view of Conklin et al. (U.S. Pat. NO. 6,141,653).

Regarding to **claims 21,** 23, 30-33, and 35-50 Ronen substantially discloses a popup advertisements, comprising of:

providing information regarding a related subject matter from an alternate source, comprising:

obtaining a first set of electronic information to be displayed to a user from a first source on a network, wherein the first set of electronic information comprises information identifying a first transaction to be made (see abstract, lines 10-15, col 1, lines 59-67);

Page 2

accepting transaction data to effect the first transaction; requesting a second set of electronic information (second set of electronic or popup advertisements) see., abstract, col 1, lines 59-67, col 2, lines 54-67; to displayed to the user from the second source on the network, wherein the second set of electronic information comprises information identifying a second transaction to be made; providing data to display to the user without the user's knowledge of an origin of the second set of information visual representation of the second set of electronic information as though originating from the first source; and accepting a transaction (see ., abstract, col 1, lines 59-67, col 2, lines 13-67, col 3, lines 44-67).

Ronen does not explicitly disclose the step of routing the transaction data to a second source.

However, Conklin discloses a multivariate negotiations over a network or business transactions, wherein business transaction negotiation deals have many variable items, such as price, quantity, quality, warranty. An internet routing transaction see., fig 1A, item 04, abstract, col 1, lines 41-47, col 7, lines 30-64. It is obvious to realize that transferring information to user from autonomous source is well-known in order to keep sells autonomous. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the teaching of Rosen by including the limitation detailed above as taught by Conklin because this would keep the information autonomously to client to Rosen's Internet selling system for the benefit of providing buyer what they needs and keep the seller autonomously before sells transaction takes place.

Regarding to claims 22, 24, and 29 Ronen discloses the invention of claim 1, wherein the transaction authorization comprises a user authorization to share the transaction data with the second source (see abstract, col 3, lines 44-67 or URL).

Application/Control Number: 09/487,354

Art Unit: 3621

Regarding to claims 25, 26, 27, 28, 34, Judson in view of the obviousness statement

Page 4

discloses the invention of claim 7. Judson does not discloses said system wherein a

payment means, a delivery means, and a client identifying means are at least included in

said data.

However, it is obvious to realize that many techniques have been used to encrypt file i.e for

transferring billing information from one source to another and shipping information. It would

have been obvious to one of ordinary skill in the art at the time the invention was made to

combine the Judson's popup advertisements with the obviousness statement by giving client

an option to pay direction to the second source by having the IAP transfer client's

pre-established billing information such as payment means, delivery means and shipping

identifying means to the ISP when the client decides to make purchase from the ISP.

Regarding to claim 9, Judson in view of the obviousness statement discloses the invention

of claim 8. Judson does not discloses said system wherein a second display component is

presented by said second source requesting at least entry of said payment means, said

delivery means, and said client identifying means, if said data is insufficiently received by

said second source.

However, it is obvious to recognize that billing information have to be satisfied before a sales

transaction can be completed. Therefore, it would have been obvious to one of ordinary skill

in the art at the time the invention was made to include the feature of presenting to client the

request of filling out billing information if such information was not completely received in

order to complete the sales transaction.

Conclusion
